**WHAT IS A 'BOARD FOOT'?**

Hardwood lumber is typically sold by the board foot, a unit of value equivalent to a board that is one inch thick, one foot wide and one foot long, or 144 cubic inches. Use the formula below:

$$\text{length}'' \times \text{width}'' \times \text{thickness}'' \div 144 = \text{bdft}$$

\*When calculating lumber needs, don't forget to figure 15% to 20% additional due to waste.
